Education

Techno International Newtown

Master's of Computer Application

Aug. 2024 – Jul 2026

Kolkata, West Bengal

Guru Nanak Institute of Technology

Bachelor's of Computer Application

Aug. 2021 – Jul 2024

North 24 Parganas, West Bengal

Relevant Coursework

- Machine Learning
- Data Structures
- Software Methodology
- OOP With Java
- Python
- Artificial Intelligence
- DBMS
- Networking

Experience

Euphoria Gnex

Machine Learning Intern

June 2023 – September 2023

Salt Lake Sector V, West Bengal

- Worked with Supervised, Unsupervised, and Reinforcement Learning techniques in real-world applications.
- Developed an AI-based Cheating Detection System for online exams using Python and computer vision.
- Automated test workflows by creating Python and PowerShell scripts for organizing XML results and deploying builds.
- Used Jenkins CI/CD pipelines to run daily tests and generate automated performance reports.
- Created simple web-based dashboards using HTML, JavaScript, and CSS to visualize test metrics.

Institute of Intellectual Information

Full Stack Developer Training

May 2019 – August 2019

Dum Dum, West Bengal

- Trained in full-stack development using PHP, HTML, CSS, JavaScript, Bootstrap, Django, and Python.
- Built responsive websites and backend modules including form handling, authentication, and dashboards.
- Performed web scraping using Python to collect and process structured data.
- Collaborated using Git/GitHub and optimized applications through debugging and testing.

Projects

Dynamic Quantum-Secured Network Slicing for 6G | Python, AI/ML, QKD

Advanced Research Project

Apr 2025 – Present

Techno International Newtown

- Developing a quantum-secured network slicing framework for 6G using Quantum Key Distribution (QKD).
- Applying AI/ML for dynamic resource allocation and threat-aware orchestration.
- Integrating heterogeneous systems including IoT, satellite, edge, and mobile networks.
- Improving QoS by reducing latency and optimizing throughput using intelligent slicing.

Plastic Segregation System using IoT | Python, IoT Sensors, ML, DL

MCA Hardware-Software Integrated Project

Sept 2025 - Present

Techno International Newtown

- Designed an IoT-based plastic segregation system using sensors to automatically classify plastic types (e.g., PET, HDPE).
- Developed real-time data processing and device communication using microcontrollers and Python.
- Built a web dashboard for live monitoring, analytics, and segregation status visualization.
- Integrated cloud storage (SQL) for logging sensor data and system performance.

Technical Skills

Languages: Python, Java, HTML/CSS, JavaScript, SQL, Cloud Computing, Web Scraping

Developer Tools: VS Code, Eclipse, Google Cloud Platform, Android Studio

Technologies/Frameworks: Linux, React JS, GitHub,

Leadership / Extracurricular

JIS Samman Sports Event

Kabaddi Team — Runners Up

2023

Guru Nanak Institute of Technology

- Achieved Runners-Up position in Kabaddi at the JIS Samman inter-college sports competition.
- Collaborated with team members to train, strategize, and maintain peak performance throughout the tournament.
- Demonstrated teamwork, discipline, and leadership under competitive and high-pressure conditions.
